PROFESSIONAL SUMMARY

Senior Backend Engineer with strong experience in building scalable, data-intensive systems using Java, Spring Boot, and Drools. Proven track record in designing rule-based engines, microservices architectures, and asynchronous processing pipelines.

Experienced in integrating distributed systems using RabbitMQ, AWS S3, and containerization with Docker, as well as collaborating with big data platforms such as Databricks and PySpark.

Skilled in performance optimization, including memory analysis and prevention of OOM issues, ensuring high system reliability and efficiency.

Solid background working across the full development lifecycle, including REST API design, automated testing (JUnit, Selenium), CI/CD pipelines (Semaphore, Jenkins), and monitoring with Grafana.

Passionate about understanding complex problems and delivering practical, scalable solutions.

EDUCATION

Software Engineer | Universidad del Aconcagua

2003 - 2011

Certified Scrum Master | Scrum Alliance

CREDENTIAL ID: 989922

[SEE CERTIFICATE](#)

English Upper Intermediate | ECII Institute

2003 – 2011

Data Engineering with Databricks | Databricks

ISSUED JUL 2024

[SEE CERTIFICATE](#)

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Silicon Development, Health Catalyst (Texas)

10/2020 – PRESENT

At Health Catalyst, developed and maintained a scalable rule engine service using Drools and Java, exposed through Spring Boot REST APIs.

Designed integrations with RabbitMQ for asynchronous processing and AWS S3 for data ingestion and storage, working alongside Databricks and PySpark pipelines.

Improved system performance and stability by analyzing memory usage and mitigating OOM issues.

Ensured code quality with JUnit and MockS3-based testing, and containerized services using Docker.

Monitored system health with Grafana and enhanced CI/CD pipelines using Semaphore.

Senior Software Engineer | Digicel Group (Jamaica)

04/2020 – 10/2020

Developed payment processing services using Java and Spring Boot, exposing RESTful APIs.

Implemented secure authentication and authorization workflows using Spring Security and JWT tokens.

Designed and implemented idempotent operations to ensure reliable and consistent transaction processing. Applied the Saga pattern to manage distributed transactions and inter-service communication.

Performed testing using JUnit and DUnit, and worked with Oracle and SQL Server databases.

Utilized Azure DevOps for project management and collaboration.

Senior Software Engineer | Navis CRM (Orlando, Florida, USA)

05/2018 – 04/2020

Utilized AWS technologies, including S3, SQS, SNS, and Lambda.

Proposed a serverless architecture to enhance efficiency.

Designed and implemented ETL pipelines using AWS Glue (Catalog and Crawlers) to integrate data from multiple sources into a data lake architecture. Utilized PySpark for large-scale data transformations and AWS

Athena for querying and analysis, ensuring efficient and scalable data processing.

Senior Software Engineer | Digicel Group (Jamaica)

02/2018 – 05/2018

Worked on frontend development, creating new interfaces for top-ups, user profiles, refunds, and more.

Technologies: J2EE, MaterializeCSS

Database: Oracle

Software Engineer | Recovery Planner (Connecticut, USA)

02/2014 – 02/2018

Full-stack developer with experience in J2EE, JSF, and MySQL. Worked with SVN and Git, using Eclipse and IntelliJ, and deploying on Apache Tomcat.

Followed Scrum methodology and CI practices with Jenkins and CruiseControl.

Developed new features, improved backend/frontend components, and created reports using Apache FOP, POI, and Docx4j.

Implemented testing with JUnit and Selenium, and customized Jira through plugin development and API integrations (Java/REST, Atlassian SDK).

Software Engineer | Tangoe (Orange, California, USA)

09/2010 – 02/2014

Worked at Tangoe on the Invoice Management solution, improving performance through automation.

Developed a service with MVC architecture for invoice mapping using Java and Drools (rule engine), capable of reading telecom invoices, automatically parsing them, and storing the data in the database.

Software Engineer | Sitrack (Mendoza, Argentina)

02/2007 – 09/2010

Company focused on land and maritime vehicle tracking solutions.

Contributed to PHP development using PEAR, along with Java and JavaScript, and managed version control with SVN.

Participated in the development of new applications and the enhancement of existing systems.

Worked on network configuration (Cisco routers and 3Com switches) and implemented integrations with monitoring device protocols.

Also conducted research on new technologies and contributed to database migration from Informix to PostgreSQL.

SKILLS

- Software development lifecycle
- API development experience
- Quality assurance
- Testing and debugging
- Performance optimization
- Microservices architecture
- Event driven architecture
- AWS Technologies
- Experienced in AI-assisted development - GitHub Copilot (test generation, code acceleration, refactoring)

LANGUAGES

- Spanish: Native
- English: Professional
